

Traditional and Custom Bike Racks

Through our subsidiary, Tube Bending Northwest, BikeLid, LLC manufactures traditional and custom bike racks, available in stainless steel, hot dipped galvanized or powder coated finishes.

2017 Bike Racks

Bending Capabilities

Minimum CLR 2" to infinite
 Up to 4½" pipe and rect. tube
 Up to 3½" square tube
 Up to 6'x3" rod, bar, channel
 Circles, spirals, variable arcs
 Materials in carbon and stainless steel, chrome moly, aluminum and copper

Fabrication Capabilities

Milling, drilling, punching
 Angle and section cutting
 End forming
 Notching and riveting
 Thermal arc mig/tig welding
 Grinding and finishing
 Plate and sheet forming

Tube Bending Northwest manufactures a full range of traditional and custom bike racks—including U and O (singles and ganged), wave and vertical.

We offer precision 3-dimensional tube and pipe bending and fabrication in a variety of materials and sizes. Our 3-axis, 2-axis and roll-bending CNC machines produce repeatable parts and high accuracy levels measured in tenths of degrees.

For applications that require long runs of tube, we also offer tube-joining services including end welding, swaging, and coupling. Through our network, we can also provide large material roll bending and plate forming, laser and plasma cutting, galvanizing, powder coating, and a variety of other manufacturing services.

We work with customers to accommodate short turn-around, other scheduling requirements and quantity variations.

Other Application Examples

- Hand rails, architectural and art elements
- Street furniture and furniture frames
- Shelter and sign frames, retail displays
- Prototyping
- Chassis, roll cages and trailer frames
- Corona rings and substation components
- Marine tubing and shelter frames
- Agricultural / machinery tubing
- Lawn and garden products
- Dairy tubing and animal containment
- Exercise and sporting goods
- Automotive and aviation tubing
- Meter guards and boiler tubing
